

(Sr.) Product Quality Manager (m/f/d) - GaN Industrial Sustaining

What you will do

- Drive quality performance to meet customer/market requirements, meeting benchmark quality expectations at product release
- Lead customer quality communications, balancing quality needs, supply constraints, and financial impact, to support design-win to grow sales
- Lead the business impact arising from quality issues & complaints, ensuring strong technical risk assessment and effective corrective actions
- Improve procedures and add new methods to reduce systemic issues
- Build and lead a high-performance team

What you will need

- University Degree or equivalent in a relevant field
- Background in electronics, with knowledge of semiconductor technologies, ideally in GaN development, manufacturing, and reliability
- Experience in semiconductor qualification processes for all market segments, ranging from consumer to automotive
- High engagement on achieving targets and objectives of the position
- Pragmatic and solution-driven leadership style with the ability to influence at all levels
- High energy and drive with a commitment to quality and continuous improvement
- Strong language skills, ideally in both English & German, with excellent communication and presentation skills
- Willingness to undertake domestic and international travel as required
